

Searching for an **in-flight** phone solution?

Say hello to Forté™

and goodbye to
the high costs of
in-flight phones.

EMS
SKY CONNECT

Searching for an in-flight phone solution?

EMS Sky Connect's Forté™ phone system is designed specifically for aircraft operators who want a phone that works when and where they need it, and at a cost they can afford. EMS Sky Connect leads the aviation industry in Iridium-based voice and tracking with certified systems flying on every type of aircraft in the world.

Cell Phone Convenience

In contrast to other elaborate systems, Forté delivers the basic service you need to remain productive and in touch no matter where you fly. Using the Iridium satellite network, Forté delivers cell phone convenience anytime, anywhere.

Mix-and-Match Expandability

Forté includes a built-in intercom feature to accommodate multiple telephones. This makes it easy for the flight crew to talk to passengers and vice versa. Each Forté line can support any combination of four wireless, corded or MMU-II telephones.

Forté Cordless Handset

Convenient for larger cabins or just for those who don't want to wrangle with a cord, these handsets are designed for jet cabins with typical noise levels. Despite its compact size, the large color display and backlit keypads on this handset make it very easy to use. Up to four handsets can be installed throughout the cabin and on the flight deck.

Forté Cordless Handset

Forté Corded Handset

Designated for cabins with higher noise levels, this tethered handset is very effective at making your words loud and clear. It also boosts the earpiece volume so that your conversation is comfortable and easy.

Forté Corded Handset

Forté Cockpit Dialer

For those in the cockpit who prefer to keep their headsets on, the new MMU-II cockpit dialer allows you to select the telephone on your audio panel (just like another radio) so anyone on the flight deck can hear and be heard with the best fidelity. The MMU-II is a standard size DZUS-mounted interface with a dimmable two-line display, full telephone keypad and a sophisticated set of unique features that make the MMU-II very cockpit-friendly.

Forté Cockpit Dialer

Ask your dealer for the EMS Sky Connect Forté satellite telephone. It's the easy, reliable and cost-effective telephone system that brings cell phone convenience to the cockpit and cabin.
